

iFocus

***FAST** offers seamless integration with SafeEntry, providing hands-free temperature monitored check-in to space*

Benefits

- Improves productivity
- Reduces peak-hour congestion
- Hands-free operation

Features

- ✓ Automatic check-in **without** scanning QR code
- ✓ One-time user registration
- ✓ No-Mask detection
- ✓ Facial recognition
- ✓ Temperature measurement

Technical Specification

- Up to 50000 facial identities
- Infrared temperature sensor
- 35.0°C – 42.0°C temperature range
- Average below 10 secs SafeEntry check-in
- 215(L) x 125(B) x 20(H) mm
- DC +12V adaptor with 240V AC input
- Storage of identities compliant with PDPA policies

SafeEntry

Temperature
Monitoring

SafeEntry has been used island wide to control the spread of Covid-19 infections across Singapore. While effective for pandemic control, it requires additional manpower to handle and guide visitors through the temperature taking and SafeEntry process. **FAST** SafeEntry solution helps **shop owners, SMEs and clinics** use minimum resources in managing visitor and staff access.

FAST provides visitors with easy self-registration and automatic SafeEntry submission. Once registered, the following visits will be a simple temperature scan by **FAST** that automatically performs SafeEntry check-in, avoiding the need to scan QR codes. In this way, business owners need less resource to manage visitors, hence leading to higher productivity.
